ImmunoCAP **Is it allergy?**

Serial number : 003 Edition : 1. 2022

ImmunoCAP™ Allergic test result can help clinicians :

To identify the offending allergen

To confirm a clinical suspicion of allergic sensitization

To rule out allergic sensitization

To determine patients that are appropriate for further testing

To monitor levels of IgE antibodies for prognosis

PAINLESS

Technology that makes a difference

ImmunoCAP is a sandwich Immuno Assay. The Technology is based on an extremely high binding capacity of the cellulose with the allergens, which ensures the binding of all relevant antibodies, regardless of antibody affinity.

The ImmunoCAP solid phase consists of a cellulose derivative enclosed in a capsule. The hydrophilic, highly branched polymer provides an ideal micro environment for allergens, binding them irreversibly while maintaining their native structure

This solid phase is an excellent carrier of antigens (allergens) & provides favorable reaction conditions, including short diffusion distances.
